# VEASENSE

VEASENSE is an affordable Healthcare Robot created for the modern workplace. By its medical sensors, VEASENSE provides telepresence, continuous monitoring and televigilance for patients at any type of medical and healthcare centers.

VEASENSE Robot will help Doctors and medical staff to detect early patient deterioration and report physiological instability. A complication can be avoided before it can occur.

In addition, a Doctor could connect to the robot, when necessary, and make preliminary diagnostics. VEASENSE allows you to interact with people while being in a different location and in a synchronous way.

## Veasense solution is made up of two parts

Namely telepresence robots and an online appointment booking platform for patient visits.

The Veasense telepresence robot provides virtual visits of families to their hospitalized relatives. It is a mobile videoconferencing system providing a remote visit. It also allows doctors to connect remotely and monitor patients.

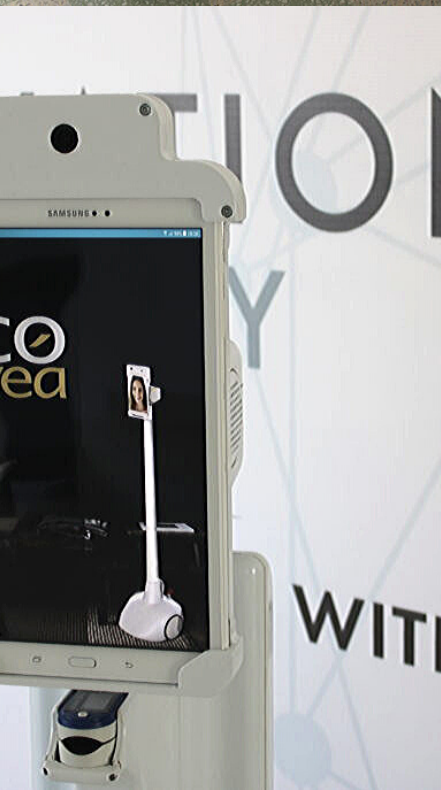

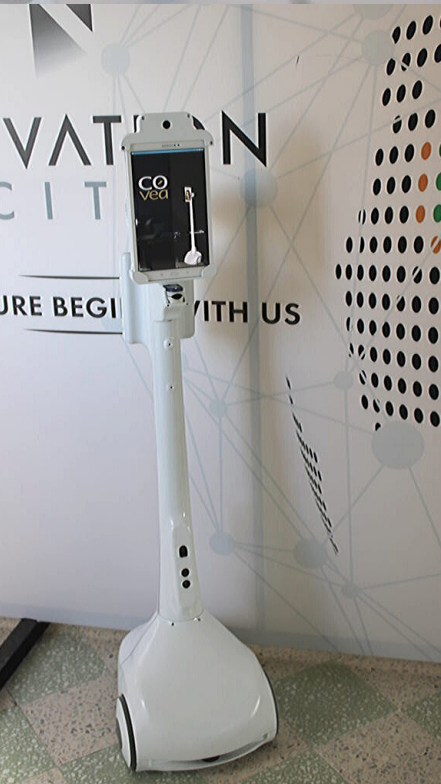

The online booking platform allows families to make visit appointments for their loved one, manage the robot fleets and their availability as well as organize all visits and consultations remotely.

## Features

- Real-time video chat
- Chatbots
- Auto charging
- Safe navigation
- Real-time video chat
- Maintain social links

## Uses Cases

- Retirement home
- Hospitals
- Hotels
- Corporate
- Airports
